

Dear Sir;

Due to the nature of my work I spend many hours travelling to various jobs and have passed this time by listening to my radio.

But in recent years the quality of FM radio has declined radically.

The same old junk is heard repeatedly and I got so tired of the poor quality of this programming I began listening to books on tape instead of FM radio.

Recently however, I discovered satellite radio and have been thrilled at the availability of the variety of programming.

Now I find that congress is trying to strangle satellite radio in its infancy at the behest of the media conglomerates that are responsible for the garbage quality of FM radio.

I urge you to oppose HR 4026 and leave me my right to listen to whatever I want.
